

3 March 2014

Fellow Health Care Professional:

As an executive Health Care Administrator you understand the importance of implementing training to ensure that only the safest and highest quality public health care is provided at all times. We will work with you to meet The Joint Commission accreditation and certification standards (*EM.01.01.01*) as it relates to exercising a disaster response scenario in a quality manner that reflects your organization's commitment to meeting these performance standards.

The continuity of hospital operations in the event of disasters or emergencies is paramount. This goal can be achieved by implementing a comprehensive education program that addresses the continuity of your mission, vision, and strategic goals and ensures continuation of patient care, safety and hospital operations in the event of a disaster or emergency.

Is your organization prepared for an all-hazards incident to include national emergencies, technological, natural, or man-made disasters such as terrorist events involving weapons of mass destruction (WMD)?

Do you have a business program to maintain continuity of operations during such an event?

We at IIF Data Solutions, Inc. (IIF) can provide emergency management training, business continuity of operations, risk management, and mitigation programs to ensure that your health care organization and staff is prepared. We can also offer your staff table-top, small or large scale field exercises to enable the staff to practice and evaluate activation, response, and the resumption of normal health care activities.

IIF is equipped to support your health care organization emergency management training to ensure the readiness of the staff and other key individuals required to respond to any emergency.

Founded in 1998, IIF provides professional, responsive, experientially-based, all-hazards emergency management and domestic operations support services. The services include training, exercise development and execution, consultation, facilitation, long-term and on-call staffing support and a wide range of Chemical, Biological, Radiological, Nuclear (CBRN) response enterprise training exercises. IIF has subject-matter experts (SME) that possess the expertise and capability of providing education and training of medical professionals to ensure your preparedness for a potential catastrophic incident.

IIF experts understand the Emergency Management requirements of your health care organization and are able to offer individualized on and off-site training, exercise and consultation support. All training is customized to meet your specific objectives. The IIF Team has extensive experience and expertise in the many facets of domestic emergency operations. Our Team is exceptionally well versed in joint interagency, military and civilian crisis and emergency doctrine and operations. This includes planning, training, organization, staffing and procedures that continuously improve health care for the public by evaluating your health care organization and inspiring them to excel in emergency management preparation.

Support services we offer include:

- Teach a myriad of FEMA Emergency Management Institute and weapons of mass destruction courses. Includes core curriculum course design and instruction.
- Incident and Emergency Management.
- Continuity of Operations/Business resiliency.
- Review and promulgation of plans, policies and programs.
- Chemical, Biological, Radiological, Nuclear and High Yield Explosives (CBRNE) consultation, training and exercise support services.
- Understanding of the National Guard in support of civil authority.
- Understanding of All-hazards incidents, Pre and Post-Event management for healthcare services, consultation and support services.
- Plan and execute Table-Top, small or large scale CBRN response enterprise training exercises. Includes support of full-spectrum exercise development and execution.
- IIF can provide national, state, and local exercise development, facilitation and execution.

Please contact IIF and allow us to help you to meet the many requirements associated with your health care organization. For more information on the services we provide, visit our web site: <http://www.iifdata.com/core-competencies/emergency-disaster-preparedness/hco-emergency-training/>
